

Sustainable Procurement Policy

Tru7 Group's office and yard is based in Kesgrave, Suffolk. Materials recycling is carried out within the company's yard. The transportation of materials for recycling is mainly centred around the East of England. Plant hire is offered Nationwide.

Eight-wheeled tipper trucks are used to deliver waste to the company's yard where they are processed in line with the Permit issued by the Environment Agency to produce construction aggregates. These aggregates are then sold to industry and are delivered to customers again using the eight-wheeled tipper trucks.

This work ensures that a minimum of construction type waste is sent to landfill.

Mobile plant is used in the company yard to assist with the processing of the materials including loading shovels, 360 excavators, mobile screeners, and mobile crushers.

The Management of Tru7 Group recognises that the materials, products, and services it procures may in their extraction, manufacture, use, and disposal have an impact on both the current and future inhabitants of the planet.

This Policy is in addition to the Tru7 Group's Environmental Policy Statement and Environmental Management System which complies with the requirements of ISO 14001. Tru7 Group is committed to procuring those materials, products, and services (where reasonably practicable), which exhibit improved levels of sustainability in preference to those originating from non-sustainable equivalents.

Tru7 Group will fulfil its commitment by identifying those materials, products, and services procured which are deemed to be significant by virtue of the scale of the procurement and the degree to which they impact on sustainability.

Procurement Policies will be established for those items which are deemed to be significant, to provide guidance to those responsible for specifying or purchasing these items.

The criteria established in the Procurement Policies will give preference to those items which demonstrate improved levels of sustainability.

This policy is reviewed from time to time, typically annually, together with TRU7's environmental policy, objectives and targets.

This policy is implemented through the Environmental Management Procedures listed within this system and through relevant Operating Procedures, Work Instructions, and Purchasing Policies.

This policy is communicated to relevant employees and contractors and may be made available to members of the public and interested parties on request.
